Summary

Third-year AI & Data Science engineering student with hands-on experience in full-stack web development, Django-based systems, and real-world client projects. Experienced in building scalable web applications, integrating payments, and deploying production-ready solutions. Strong interest in AI-driven systems, backend engineering, and building impactful products.

Technical Skills

Programming & Querying: Python, SQL, C, C++

Tools & Platforms: Git, GitHub, Razorpay Integration, Cloudinary, Render, Microsoft Excel, Docker, Railway

Web & Backend: Django, REST APIs, HTML, CSS, Tailwind CSS, JavaScript, MERN

AI/ML/DS: Pandas, Numpy, Groq, Scikit learn

Soft Skills

- System Design, Database Design & Management
- Problem Solving & Algorithmic Thinking
- Software Architecture & Scalable Systems
- Technical Research & Emerging Technologies
- Product Development & MVP Building
- Team Leadership, Collaboration & Project Management
- Technical Documentation & Presentation
- Problem Solving & Critical Thinking

Education

Rajiv Gandhi Institute of Technology, **T.E., Artificial Intelligence and Data Science** Graduating June 2027

Mumbai University, Mumbai, IN

Relevant Coursework: Artificial Intelligence, SQL, Probability & Statistics, Database Systems, Web Technologies

Experience

AI & ML INTERN, INTRAINZ, (Remote) Jan 2024-Jul 2024

- Implemented machine learning concepts through two applied research projects.
- Worked with Python-based ML workflows for data analysis and experimentation.

WEB DEVELOPER INTERN, Unified Mentor (Remote) Apr 2024 – Jun 2024

- Built web projects using HTML, CSS, and JavaScript.
- Implemented UI components and improved frontend usability.

WEB DEVELOPER INTERN, LevelUp Events (Remote) Dec 2025 – Mar 2026

- Built web applications using Django and modern web technologies.
- Implemented RBAC systems, database schemas, REST APIs, and third-party integrations.
- Contributed to development of scalable internal tools and platform features.

Visionary Projects, Co-Founder & Technical Director *Dec 2024 – Present*

- Co-founded a technology-driven initiative focused on building digital products, websites, and innovative solutions for startups and organizations.
- Lead development of web platforms using modern frameworks and oversee technical architecture of projects.
- Conduct research on emerging technologies such as AI, web development, and digital tools to create scalable solutions.
- Manage cross-functional teams and coordinate project execution from ideation to deployment.

Projects

Portfolio

Jan 2026 - Present

- Visit: <https://vivek-jain-17.github.io/Portfolio/>

Bafna Steel Centre – Business Website & Lead System

Nov 2025 – Dec 2025

- Developed a full-stack Django-based website for a wholesale steel distributor to establish an online presence and streamline customer inquiries.
- Implemented product catalog management, inquiry submission forms, and an admin dashboard for managing leads.
- Integrated Razorpay payment gateway and Cloudinary for secure media storage and efficient image handling.
- Built an AI-powered chatbot to assist users with product queries and improve customer engagement.

LevelUp Blogs

Nov 2025 – Dec 2025

- Engineered a scalable blogging platform using Django with role-based access control (RBAC) for admins, editors, and contributors.
- Designed an editorial workflow including post creation, review, approval, and publishing processes.
- Implemented analytics features such as view tracking, read time estimation, and engagement metrics.
- Integrated Razorpay subscription system to enable premium content access for users.

Valentine_line(Dynamic Content Sharing Web App)

Aug 2025 – Oct 2025

- Built a dynamic backend-driven web application that generates unique shareable links for personalized content sharing.
- Implemented routing logic and state management to dynamically render content based on user inputs.
- Focused on backend architecture and database handling for scalable link-based interactions.

E-CELL RGIT's Website(Committee)

Aug 2025 – Feb 2026

- Leading the web team of E-CELL in building a professionally themed website for E-CELL, RGIT using React, Node and web technologies.

LevelUp SaaS Tool

Jan 2025 – Mar 2026

- Developing a full-stack SaaS platform to manage student communities, events, and collaborative projects.
- Implemented features including gamification systems, leaderboards, event management, and community discussions.
- Built role-based access control (RBAC) for different user roles such as admins, moderators, and members.
- Used Django and HTMX to create interactive and dynamic user experiences without heavy frontend frameworks.
- Link :- <https://account.levelupevents.in/>

AI-Driven Business Management System (BMS)

Jan 2026 – Apr 2026

- Building a full-stack Django-based system to manage inventory, staff, CRM, and business operations.
- Implementing modules like inventory tracking, task management, RBAC, billing, and dashboard analytics.
- Integrating AI features for sales insights, demand prediction, and decision support.

Extracurriculars

Jt. General Secretary – Entrepreneurship Cell, RGIT

Jul 2025 – Present

Vice President – SOCH , RGIT

Aug 2025 – Present

Technical General Secretary, Student Council, RGIT

Feb 2026 - Present

Led teams of 75+ members to organize entrepreneurship 10+ events, startup competitions, and community initiatives.

Oversee technical initiatives and digital platforms for student activities.
